here! Thanks to a lot of self-training, I was able to
get through Rails Tutorial 2. This tutorial is the

one that follows the same principles described in "Rails Tutorial 1: Build a Blog" & "Rails Tutorial 2: Structuring a Rails App". I was going to write the tutorial, but due to issues I had with the previous one, I decided to create a new tutorial and write it. I had used the same commit history in "Rails Tutorial 2" and took the same backups.

The environment was pretty much the same except for the new cloud instance and the new URL. Because I'm not sure if there's a better way of setting it up for this tutorial, I skipped this part. I created a fresh VM and set it up as a Rails app using the "Start with a clean rails app" section from the tutorial. I'm using the free "Amazon EC2 free trial" and I'm using an AMI(Amazon Machine Image) of Ubuntu 16.04. Note: To start a Rails app on a cloud instance in AWS from a downloaded or built image, you need to point the app to the right region or availability zone. I'm using us-east-1 which is us-east-1d, us-east-1c and us-east-1b. Deploying to the cloud Creating a new

project in the cloud If I'm not mistaken, you need a Linux operating system to run a Rails app. I'm using Ubuntu 16.04. For me, to get the "Create a new ubuntu instance" option to work, I had to add this to /etc/ec2/group.d/ec2-setup- 3da54e8ca3
