Home or Work Space, Custom Viewports – enables customization of viewports on a 2D view for designer-like tools and data. Snap Rotation – orienting the drawing along the X, Y, Z axis automatically. True Perspective – rotating the drawing in a single step to accurately align the model to the drawing's view. Integration Additionally, the AutoCAD functionality is enabled in Microsoft Office 365, enabling users to view, edit and create drawings directly from a .docx, .xlsx, .pptx, or .potx file. The integration is based on the functionality of the Microsoft Office 365 Add-in and the Microsoft Visual Studio Add-in. Drawings created by AutoCAD are more valuable than ever, and feedback from your stakeholders is critical. Markup Import and Markup Assist help users quickly incorporate feedback and maintain their drawing integrity by importing and automatically rendering visual feedback. As the user submits feedback, the file is automatically updated. The ability to import and render feedback is supported in several key areas. Drawing and model canvas objects: Comment, annotate, and review objects in drawings and models using tools you already know. Comment can be viewed, exported, and modified as you normally would, while annotations and comments are linked to specific objects in the drawing and model canvas. Revisions: Save past revisions for the most recent state of the drawing file to the same location in which the original drawing was saved. Return to a previous state in the drawing by opening the latest saved version or loading the most recent saved revision. Snap to context objects: Snap to new and existing objects so you can have two different objects aligned and linked without having to manually place them in relation to each other. Drawings from PDFs: Import, edit, and send PDFs created in AutoCAD as AutoCAD drawings with no additional changes to the underlying PDF. Tool palettes: Newly added palettes appear automatically as you perform a task such as commenting an object or selecting a new style. Sheets: Synchronize sheet text and edit controls without requiring that the user return to the drawing. A sheet is a logical grouping of objects, called a sheet package. Links: Use links to the drawing in the AutoCAD Office or other applications, such as Microsoft Office and Web browsers. Comments: Make comments for object labels that are visible in the drawing. Comments are rendered as you type and are saved and loaded to the drawing as an annotation object. Assist: Use tools to automatically annotate, add and modify comments, and draw multiple types of visual feedback into your drawings. Assists work in the context of the drawing and are applied without having to select the correct type of object, insert the tool, or draw an arrow. Choose from one of three assists for comments: Insert comment: Insert a comment under a selected object, associating it with the object. Set comment: Associate a comment with a selected object, and modify its
