After long wait for H.265 in video converter, we bring to you a powerful and simple software that takes all the relevant features with ease. Video Converter Pro is a simple-to-use piece of kit which enables you to convert video files of various formats into MPG, MOV, MP4, AVI, WMV and FLV. It comes packed with an intuitive set of options which can be easily figured out by users, even the ones less experienced with such software. Ad-supported application The installation procedure does not take a long time to finish. However, since it is ad-supported, Video Converter Pro offers to download and install third-party components that it does not actually need to work properly. These apps can be excluded from setup by paying a little attention, though. Clear-cut interface with intuitive options The GUI is quite simple to navigate. Video clips can be added to the task list using either the file browser, folder view or drag-and-drop method. Convert in single or batch mode An important aspect worth mentioning is that batch processing is supported, which means that you can convert multiple videos at the same time to speed up the entire process. It is possible to preview clips in a small, built-in media player, point out the preferred output format for each item, view their duration, size and status, as well as modify the default saving directory. You can also remove an item from the list or clear the entire queue to start from scratch. Conclusion We have not come across any stability issues in our tests, since Video Converter Pro did not hang, crash or pop up error messages. It has a good response time and carries out conversion jobs rapidly while remaining low on the system resources. Too bad it's filled with adware at installation. On top of that, it does not contain professional settings, as its name implies.
